

Confined Space Entrant, Attendant and Supervisor

Course Description

This course covers the identification, classification, control, monitoring, and rescue requirements for confined spaces in the workplace, in line with Occupational Safety and Health Act (OSHA) standards.

As a confined space entry supervisor, you'll learn about how workers' issues affect safety and how to recognize and deal with poor morale, bad attitudes, and personal problems.

We'll also look at general workplace hazards, including chemical reactions and toxic exposure, and how to deal with them proactively using hazard controls.

There's information on safety and supervision responsibilities, leadership qualities, and how encouraging safety consciousness and adopting safety principles can boost safety performance.

The course also covers OSHA standards, employer requirements, and the contents of Permit-Required Confined Space (PRCS) written plans.

On a more practical front, we'll look at the characteristics and hazards of confined spaces, including the limited means of entry and egress, toxic atmospheres, air monitoring, ventilation, the use of oxygen, the purge time formula, and the Hierarchy of Controls.

You'll learn about additional safety options, such as isolation devices, line breaking, and Personal Protective Equipment (PPE).

There'll also be coverage of Confined Space Permits and confined spaces training.

Finally, you'll be taken through the mechanics and benefits of team working in confined spaces and the correct procedures to follow when organizing rescues.

Learning Objectives

By the end of this course, you will be able to:

- Identify Legislation dictating Confined spaces
- Identify the characteristics of a confined space
- Understand the roles and responsibilities of everyone involved in confined space work
- Recognize the hazards of confined spaces

Target Audience

This course is aimed at anyone who will be working in or near to confined spaces, as well as their supervisors and managers. This is an online awareness course only and should be paired with appropriate practical training for a candidate to be considered full competent to enter a confined space.

Advantages

Knowledge of the dangers associated with working in or around confined spaces will help you to protect yourself from those dangers.

Online training is flexible, efficient and cost effective meaning the candidate can progress through the modules at their own pace and in their own time, so they can fit the training around their work and personal life

Modules

Course	Module Number	Module Name	Pass % Required
Confined Space Entrant, Attendant and Supervisor	1	General Employer Duties Under OSHA Act	70
Confined Space Entrant, Attendant and Supervisor	2	Confined Space Entry Supervisor	70
Confined Space Entrant, Attendant and Supervisor	3	Confined Space Specifics	70

Recommended System Requirements

- Browser: Up to date web browser
- Video: Up to date video drivers
- Memory: 1Gb+ RAM
- Download Speed: Broadband (3Mb+)

Duration: 60 minutes (*Note: This is based on the amount of video content shown and is rounded off. It does not account in any way for loading time or thinking time on the questions).*
